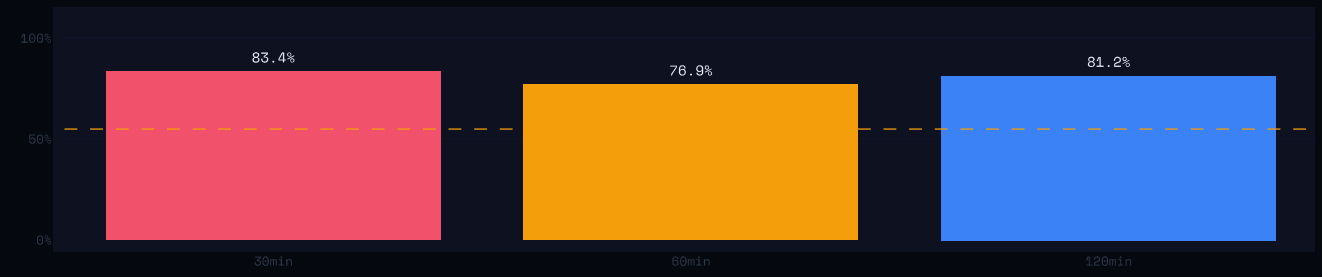
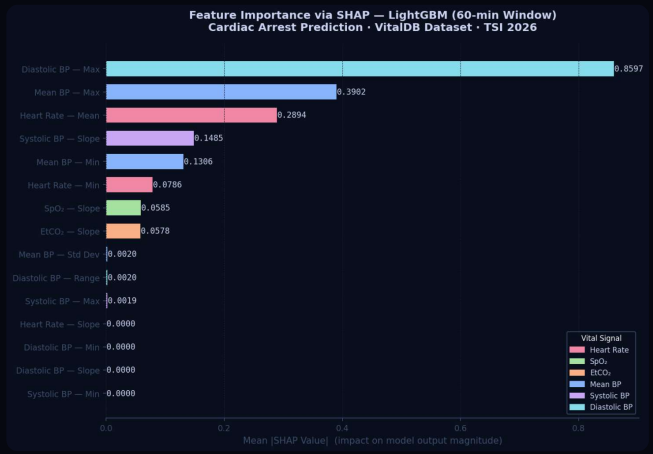
RISK ACROSS AVAILABLE WINDOWS

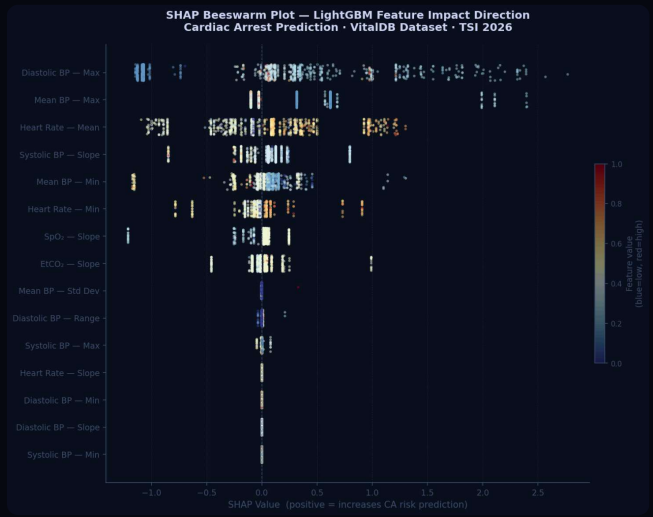


🔬 SHAP Feature Interpretability — LightGBM (60-min Window)

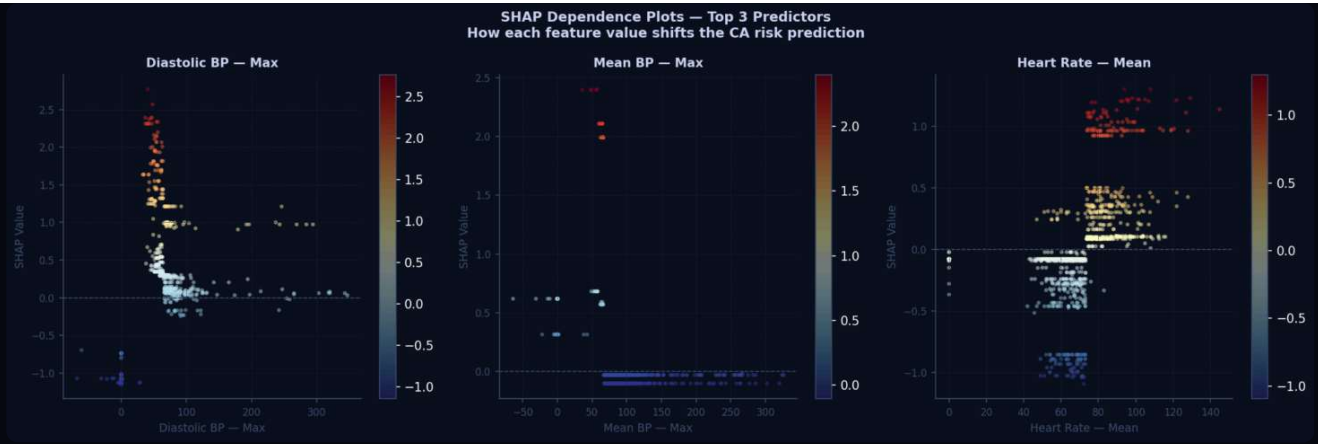
SHapley Additive exPlanations · TreeExplainer · AUROC 0.9073 · VitalDB Dataset · TSI 2026



Mean |SHAP| — Top 15 Features



SHAP Beeswarm — Feature Impact Direction



SHAP Dependence — Top 3 predictors

🔬 **How to read these charts:**

Bar chart — average magnitude of each feature's impact. Longer bar = stronger predictor.

Beeswarm — each dot is one patient. Red dots pushed right = high value increases CA risk. Blue pushed left = decreases risk.

Key finding — Diastolic BP Max, Mean BP Max, and Heart Rate Mean are the top 3 predictors. Run `python shap_analysis.py` to regenerate.

🟢 **240min** — Full 4-hour window | 🔵 **120min** — 2-hour window | 🟡 **60min** — 1-hour window | 🔴 **30min** — Minimal 30-min window

🔴 CRITICAL ≥75% — Alert physician immediately | 🟠 HIGH 50–75% — Increase monitoring | 🟡 MODERATE 25–50% — Watch closely | 🔵 LOW <25% — Routine monitoring

Clinical decision-support prototype · All treatment decisions remain with the attending physician · Sachu Mon P. Sajeev · MSc Data Science & AI · TSI University Riga · 2026
